Dear Mr. Kievit:

The City of Spokane operates two wells within three miles of the North Market Street site. The Central Avenue and Hoffman Avenue locations feed into the City's North Hill System which has a connected population of approximately 40-50,000. It is true, however, that under certain conditions of heavy use or combinations of equipment failures that water from any of the City's major water systems can and will be sent to other parts of the City. The City's total connected population is approximately 185,000.

Sincerely,

Phil H. Williams, Director
Environmental Programs

Mr. Phil H. Williams, Director
Environmental Programs Department
City of Spokane
Skywalk Level-Municipal Building
Spokane, Washington 99201-3334

Dear Phil,

Pertaining to our phone conversation this afternoon, I am seeking documentation on the total population served by the Central Avenue wells and any other parts of the supply system which they interconnect with. Please specify this figure in a letter. If you have any questions, please call myself or Michael Spencer at 438-3017 and 438-3018 respectively. Since we both have more important things to do than writing these letters back and forth, you could clear this issue once and for all by documenting as you did over the phone that your public water supply system is entirely interconnected and note the total population served.

Please mail your letter to:

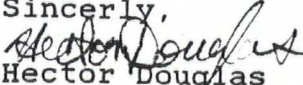

Bob Kievit
